In-class - Practice PHP problem: Sessions

This problem is modeled on the pizza application demonstrated last class. This mini application will simulate someone eating smarties out of an infinite barrel of red, yellow, green and blue Smarties. Your application will keep track of how many of each color your current eater has eaten of each color as well as the total count of all colors together.

When the application starts the following screen should appear (or something similar to it) , a new session should begin and session variables for each color and the grand total should be created and set to zero.

Practice Smarties Eating

Eating a box of Smarties:

How many of each color do you want?:

Red

Yellow

Blue

Green

To date you have eaten:

0 red ones

0 yellow ones

0 blue ones

0 green ones

For a grand total of 0 Smarties!

The user enters the number of whichever colors they want to eat and clicks on the “*How many did I eat to date?*” button. This should update the running counter of each color and the total.

Practice Smarties Eating

Eating a box of Smarties:

How many of each color do you want?:

Red

Yellow

Blue

Green

To date you have eaten:

- 13 red ones
- 3 yellow ones
- 1 blue ones
- 8 green ones

For a grand total of 25 Smarties!

Once the user has finished eating Smarties, s/he clicks on the “*I am done*” button to end the session. The resulting screen should be as follows:

Practice Smarties Eating

Hope you don't have a belly ache after eating all of those s Smarties!!!!
