

## SOEN 287/ In class exercise

### Chapter 5

Based on exercises 5.3 to 5.5 of your text book.

#### Part 1:

Develop and test an HTML document that uses text boxes to allow users to enter the number of apples (75 cents each), oranges (60 cents each) and bananas (50 cents each), along with a `Submit` and `Reset` button (See figure 1). Each of the text boxes should have **its own** `onchange` even handlers. These handlers must add the cost of these fruits to a total cost. An even handler for the `Submit` must produce an alert window with the message `Your total cost is $XXX` (See figure 2)

**Order Form**

Apples

Oranges

Bananas

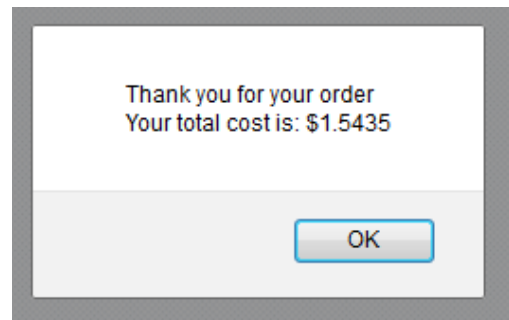

Figure 1

Figure 2

#### Part 2:

Add reality checks to the text boxes. The checks on the text box inputs should ensure that the input values are numbers in the range 0 to 99 inclusive.
