

**Question 1:**

Write PHP script which will display the unique integers in the array. For example if I have an array with the following entries 42, 24, 2, 4, 42, 24, 2, 4, 24, 42, 42, 24 your script should display 42, 24, 2 and 4

**Question 2:**

Write PHP script which given an array of strings will display the three strings that occur the most often. Assume there are at least 3 different strings in your array.

Use an associative array to keep track of each distinct string and the number of times each string occurs.

Here are a few methods you may want to consider on top of the ones we covered in class, which you can look up at

[http://www.w3schools.com/php/php\\_ref\\_array.asp](http://www.w3schools.com/php/php_ref_array.asp)

[array\\_key\\_exists\(\)](#) Checks if the specified key exists in the array

[array\\_keys\(\)](#) Returns all the keys of an array

[in\\_array\(\)](#) Checks if a specified value exists in an array
